Meghan

This is the reference that I was talking about. Please check with Ed if he already looked at it. Thank you.

Source report -

<http://www.fs.fed.us/database/feis/animals/mammal/myso/all.html#17>

Primary reference for utilizing aglands but caveat on where bats were observed.

“Callahan and others [[17](#)] reported that bats foraged in a landscape composed of pasture, corn fields, woodlots, and a strip of riparian woodland, although Indiana bat activity was not necessarily recorded in all these habitat types”

Callahan, Edward V.; Drobney, Ronald D.; Clawson, Richard L. 1997. Selection of summer roosting sites by Indiana bats (*Myotis sodalis*) in Missouri. *Journal of Mammalogy*. 78(3): 818-825. [53681]
